Remarks	1. The Japanese can was heavily rusted. The top had eight holes rusted completely through. The interesting part was that the paper padding was still dry. When the items were removed there was none of the usual evidence of moisture or water by discoloration of the plastic. It was noted that the plastic dipped items still had an oil film on the outside. Items dipped at the same time and kept on the storage shelf did not have any oil then, and the plastic was dry on the outside.

REMARKS (Continued)

2. The U.S. type rubber was in good shape. There were several small mildew or mold spots on the cloth, but other than that it was in good condition. The bayonet was in excellent condition with no signs of rust.

3. Both of the U.S. type rubber wrapped items had been completely soaked in water. The cloth backing on the rubber was easily peeled off. When the packages were opened the items inside were dry and in excellent condition.

4. The report on the film is to be supplied by the Photo Branch. The report on the radio is being made by Commo. These reports are enclosed.
